# **NMFA**

# **Findings Status Matrix**

The finding matrix attempts to identify the issues that each of the findings or areas of concern were focused. The items are scored 1-5, as follows:

- 1. Item has not been addressed
- 2. Item is in the initial risk assessment stage
- 3. Risks are identified and mitigation planned
- 4. Planned controls are operational
- 5. Monitoring and communication of component is ongoing.

As there are changes to the environment or insufficiencies with the corrective action plan as initiated, the monitoring process will identify the problem. In such cases, new action that will more effectively mitigate the risk will be sought.

#### **Continuing Risk Assessment**

The risk assessment for an internal control structure and environment is a dynamic process. It requires sufficient clarity in identifying risks, how risks should be managed, the potential for irregular activity and all significant changes to the business and environment. Attaining ongoing success of these assessments involves management, governance and staff at all levels.

#### **EXTERNAL AUDIT/**

#### Noted by: PWC HEK RLD/SD REDW

	open	Curr	ent st		plete	Continued		
Focus Area	1	2	3	4	5	Challenges	Successes	Next Steps
